EDUCATION

Southern New Hampshire University

Manchester, NH

Bachelor of Science in Computer Science

Expected January 2027

- Cumulative GPA: 3.94/4.0 | Honors: President's List
- Relevant Coursework: Data Structures & Algorithms, Full Stack Development, Artificial Intelligence, Object-Oriented Programming, Software Security, Computer Graphics, Database Management Systems.

EXPERIENCE

Pfizer

Remote

AI Engineering Extern – Document Intelligence

Jun. 2026 – Aug. 2026

- Built AI pipelines to process pharmaceutical vendor files using OCR (Tesseract, PaddleOCR) and RAG for data extraction and classification.
- Developed a RAG-based document retrieval system with LlamaIndex, optimized with chunk tuning and open-source LLMs (Mistral, Phi-2).
- Conducted end-to-end evaluation of the document intelligence system—benchmarking OCR accuracy, RAG retrieval quality, and routing performance.
- Delivered a technical report outlining model trade-offs, optimization strategies, final deployment recommendations, and built a UI for demo purposes.

Handshake AI Fellowship

Remote

AI Trainer – Software Engineering & Machine Learning

Feb. 2026 – May 2026

- Developed and evaluated complex, domain-specific programming and system architecture prompts to rigorously assess and benchmark the coding performance of large language models (LLMs).
- Analyzed generated source code, debugging logic, and architectural recommendations for technical accuracy, execution efficiency, and software engineering best practices.
- Engineered adversarial test cases to improve the model's contextual reasoning within complex machine learning frameworks and full-stack deployment environments.

PROJECTS

Fullstack Travel Website | *Angular, Express, MongoDB, Handlebars, JWT*

- Architected a dual-frontend system, utilizing server-side rendering with Express/Handlebars for the client interface and a highly responsive SPA approach via Angular for the admin dashboard.
- Engineered a flexible NoSQL schema in MongoDB to store document-based trip data, eliminating relational constraints and aligning perfectly with JavaScript object structures.
- Implemented secure RESTful API endpoints, incorporating backend password hashing and JWT authentication tokens to block unauthorized traffic.
- Refactored a monolithic dashboard into a decoupled parent/child component structure, improving code reusability across search filters and listing views.

Deep Reinforcement Learning Maze Solver | *Python, TensorFlow, Keras, NumPy*

- Developed a Deep Q-Network (DQN) agent to autonomously navigate and solve complex spatial environments, achieving a 100% success rate across all testing scenarios.
- Implemented an Experience Replay buffer and dual-network architecture to stabilize the training process and prevent system destabilization during learning cycles.

NFL Game Predictor | *Python, XGBoost, Streamlit*

- Built a predictive machine learning pipeline using Python and XGBoost to analyze historical NFL play-by-play efficiency metrics (EPA/CPOE) and forecast game outcomes, achieving ~60% straight-up prediction accuracy.
- Engineered custom features via `nflreadpy`, applied Walk-Forward validation to prevent data leakage, and deployed the trained model into an interactive Streamlit dashboard for real-time matchup visualization.

Data Analysis & Visualization Dashboard | *Python, Dash (Plotly), Pandas, MongoDB*

- Developed a full-stack dashboard using Python, Dash, and MongoDB to filter thousands of records based on search-and-rescue criteria, improving interpretation speed and reducing errors by over 90%.
- Designed robust REST API endpoints to ensure seamless data flow between the MongoDB backend and the Plotly frontend, optimizing query performance for large datasets.

TECHNICAL SKILLS

Languages: Java, C++, Python, SQL, JavaScript, HTML/CSS, Bash, TypeScript

Frameworks/Libraries: React, Angular, Express, Handlebars, Django, LlamaIndex, PaddleOCR, NumPy, Pandas, Dash (Plotly), TensorFlow, Keras, XGBoost, Streamlit, PyMuPDF

Developer Tools: Linux (Fedora), Git/GitHub, VS Code, MongoDB, PostgreSQL, JWT Authentication

Concepts: Data Structures, Machine Learning, Deep Q-Learning, RAG Pipelines, REST APIs, System Optimization, SPA Architecture
